About This Game

Extreme seasonal change defines the cycle of life in the northernmost reaches of the globe. In Venture Arctic, the player controls the forces of earth, sun, wind, and water to bring summer and winter to polar bears, orcas, and more.

Venture Arctic is an ecosystem simulator with a twist: the player is rewarded for both life and death. For every animal that passes on, the player collects a “spirit”, which they can then use to bring change to the environment. Players might spend this spirit to create winds, blowing the smells of a beached whale to a starving wolverine, or they might blanket the tundra in snow and ice to weed out the weak musk ox from the strong.

While the controls are simple, the systems are complex: players must understand the mating behaviors of the caribou, the feeding patterns of Arctic cod, and the social structures of Arctic wolves in order to succeed. Most of all, players will learn that an ecosystem’s survival depends upon seasons of plenty and of hardship, of life and of death.

I was super excited to find this game because Venture Africa was one of my fave games growing up, and I didn't even know this one existed. Unfortunately, everytime I get to the part where the raven tells me to look around using the mouse or arrow keys, the game crashes and the wondow closes. It's a shame because what I've seen of the game is really good, but I don't know if I'll ever get to play..... It's a shame playing this game after Venture Africa. The new game mechanic feels extremely overwhelming and frustrating to me. Feels like the devs wanted to add too many new features but it turned out to be a huge mess instead.
